About the Project

Understanding economic freedom and its impact on global prosperity

Project Objective

The objective of this project is to analyze and visualize the **Index of Economic Freedom** to understand how institutional and policy-related factors influence economic performance across countries.

By integrating **Tableau visual analytics** with the **Flask web framework**, this application presents complex economic data in an accessible and interactive manner.

Index of Economic Freedom

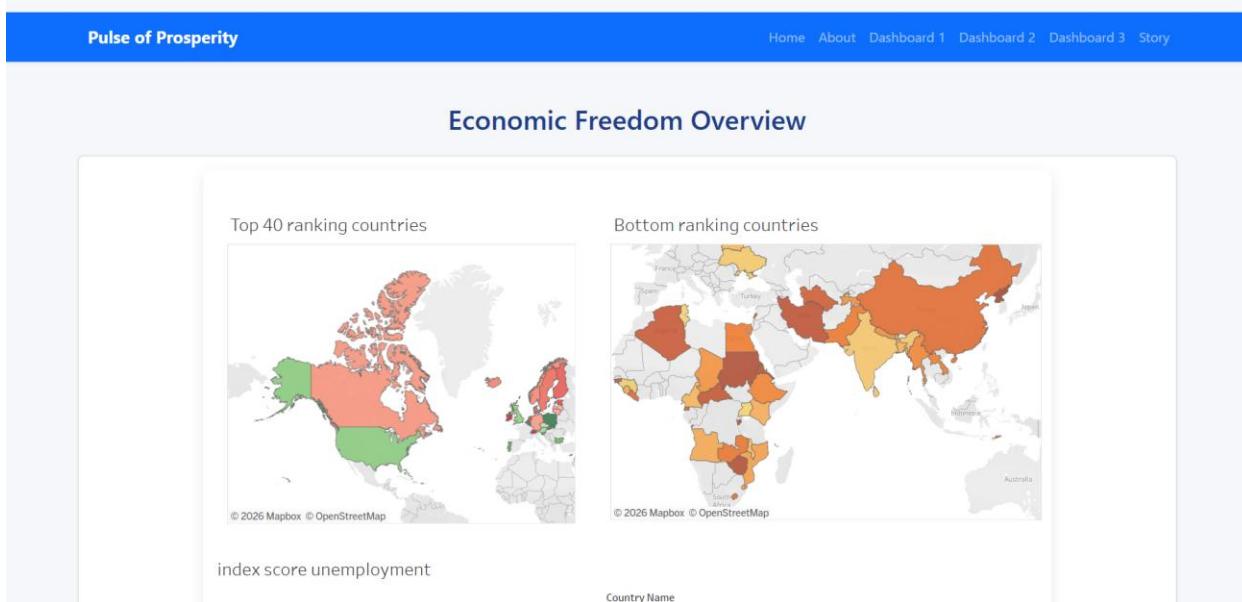

The Index of Economic Freedom evaluates countries across four broad pillars:

- Rule of Law (property rights, judicial effectiveness)
- Government Size (tax burden, spending, fiscal health)
- Regulatory Efficiency (business, labor, monetary freedom)
- Market Openness (trade, investment, financial freedom)

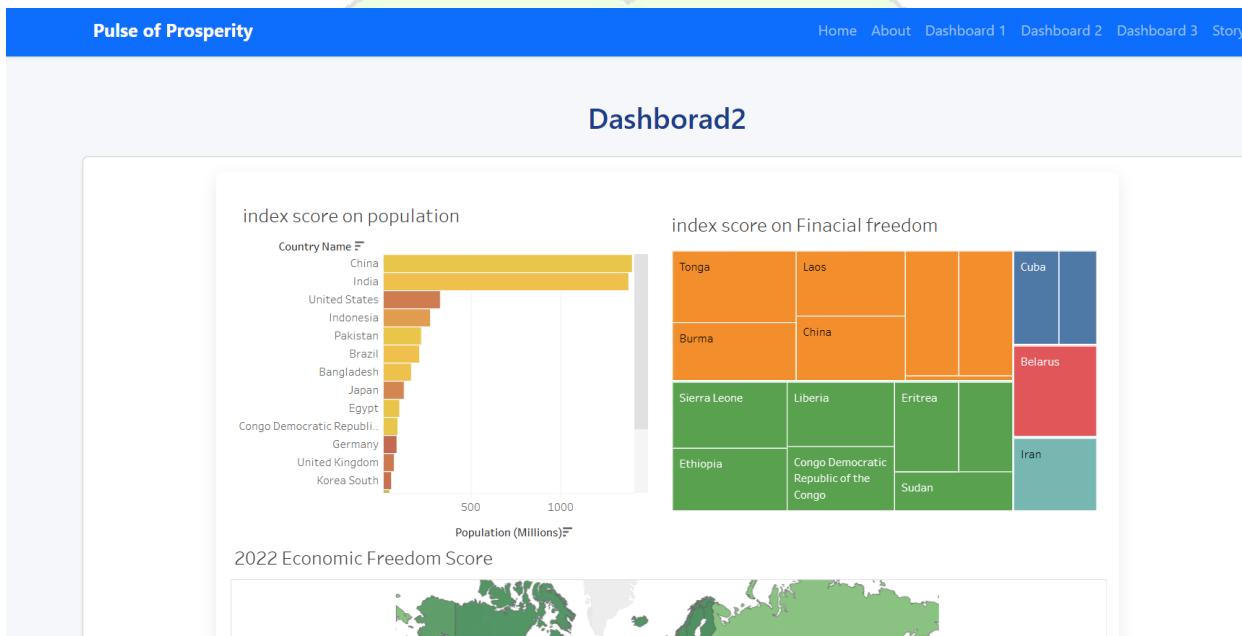

These indicators collectively provide insights into how economic environments support or hinder prosperity.
